

# PALLITE

PALLETS • PALLET BOXES • LAYER PADS

## LIGHTWEIGHT PAPER PALLETS, PALLET BOXES AND COMPONENTS DESIGNED TO REDUCE THE COST OF DELIVERY.

For the final mile, you can rely on the PALLITE® range to get your consignment to its destination whether it travels by road, sea or air. PALLITE® products save weight and space reducing the total distribution cost.

## FREIGHT SOLUTIONS

Honeycomb technology to robustly protect your consignment

Strong enough to enable stacking of 750kg

ISPM15 exemption means less paperwork and no requirement for heat treatment

Increased protection for irregular shapes using bespoke inserts and cradles

Fully collapsible to save storage space, PALLITE® boxes take less than ten seconds to build.

## SAFER FOR THE PLANET AND SAFER FOR YOU

The PALLITE® range is up to 83% lighter than wooden and plastic alternatives. With a lighter load, you will save on fuel costs and reduce your carbon footprint at the same time. What's more with no nails or splinters, the risk of injury to your team is further reduced, helping to keep everybody safe.

### BY AIR

#### Cleared for take-off

You've opted to ship your goods by air freight - maybe you have a tight deadline or you're shipping high-value goods.

We've found a way to reduce the pressures on your budgets and reduce your air freight bill. Here's how...

#### Worth their weight

Weighing in from just 3.8kg, PALLITE® pallets are up to 18.2kg lighter than a heavy wooden alternative, saving money on air freight costs. A manufacturer we helped was able to save over £160,000 per year by making the swap.

#### No red tape

The entire PALLITE® range is ISPM15-exempt which means you can save time on certification paperwork for heat-treated pallets and crates.

You can rest assured that your consignment will not be at risk of contamination as there are no nails or splinters, and there is a reduced risk of mould.

Airlines are happy to accept the PALLITE® range and many of our existing customers trust our pallets and pallet boxes for the safe shipping of their air freight.

### AT SEA

#### Perfect fit

The PALLITE® pallet is made in both standard UK and Euro sizes and can also be designed to meet bespoke specifications. We can create pallets and pallet boxes that precisely fit your shipping container which means no more shipping air. You could make significant savings on the cost of delivery by increasing container capacity utilisation by up to 28.5%.

#### Unload with ease

Every step in your delivery supply chain counts to increase cost efficiency. Coupled with better container capacity, the PALLITE® range reduces freight costs in more ways than one. Using PALLITE® pallets or pallet boxes takes the hassle out of container de-vanning and saves on handballing charges. Your consignment will be palletised and ready to go with no additional manual handling.

#### Double benefit

The PALLITE® range enables you to double-stack boxes, with up to 750kg sitting securely on the top layer.

This helps you to achieve better space utilisation in transit and save on cost.

### ON THE ROAD

#### It all stacks up

The PALLITE® range is designed to be lightweight yet strong. We have carried out extensive testing on the walls of our pallet boxes to ensure that they will protect your consignments from crushing. A double-stacked box eliminates the need for a second pallet, maximising space utilisation.

#### Safe and secure

Reducing damage results in less disruption to your supply chain saving on cost. The 25mm protective pallet box wall is designed with honeycomb cell technology to prevent damage to your consignment.

#### Stabilise your load

The protective wall also means that PALLITE® pallet boxes can help stabilise a load and reduce the risk of your consignment shifting during transit, giving you the peace of mind that your stock will not be crushed.

#### Good vibrations

Tests show that PALLITE® products absorb more of the vibrations caused by road transport than wooden alternatives. Keep your load steady and secure with our pallets, pallet boxes and layer pads.
